INNOVATION VS REGULATION:

WHAT SHOULD UNMANNED AVIATION LEARN FROM MANNED?

GEOFF PUGH AND GARETH BEVERLEY, CONSORTIQ

BROOKLANDS MUSEUM / 16 JANUARY 2019

Manned aviation has a storied and bloody history in the name of progress, and yet unmanned aviation is being held to the much higher standards of the modern era. This is why public and regulatory acceptance are now critical.

This talk will discuss what unmanned aviation can learn from the mistakes of manned aviation, and how to ensure innovation is not stifled to satisfy regulation.

Speaker Background

Geoff has a background in military air traffic control with extensive experience in terminal, maritime Carrier Strike and Area Radar. A graduate of the Britannia Royal Naval College, Dartmouth, with a degree in engineering, and a qualified Air Traffic Control Instructor, Geoff has been involved in all aspects of Air Traffic Management, training and safety management for over 16 years.

Gareth has nearly two decades of experience in designing, implementing, and supporting computer-based systems in a variety of environments from Financial houses, to Air Traffic Control. His varied career gives him a unique perspective on unmanned technology, the benefits it will bring, and how it may integrate safely into the manned aviation world.

VENUE:

Brooklands Museum
(Campbell Gate Entrance),
Weybridge, Surrey, KT13 0QN

PROGRAMME:

18:00 – Gates Open
18:45 – Lecture start
20:30 – Lecture end

**CPD certificates of attendance
will be endorsed for CEng,
IEng or EngTech registration**

Members & Non-Members are welcome

Registration:

No registration required but you are asked to sign in on arrival. £2.50 donation kindly requested from all except students.
